

Step 1: in the original branch, look at version history of code – select previous version you want to revert to (click on tree link). Select “Browse files” and then create new branch from tree

Step 2: make desired changes to this new branch and commit them

Step 3: merge the original branch into the new branch – remove unwanted code from the original branch to resolve conflict

Step 4: delete new branch so only the original branch (that has been reverted to a previous version) remains
