

Step 1: in the original branch, look at version history (commits) – select previous version you want to revert to (click on that commit). Select “Browse files” and then create a new branch from that tree

Step 2: make desired changes to this new branch and commit them

Step 3: if you want to tidy up, merge the original branch into the new branch and resolve any conflicts by removing unwanted code from the original branch

Step 4: delete the new branch so only the original branch (that has been reverted to a previous version) remains
